

Optimization of the Terminal Arrival Area

To fulfill the EU requirements for the Entry-Exit-System (EES) by 2022 the existing arrivals area will be optimized and modernized. TH Airport Consulting has developed a functional layout which included an expanded reclaim area with new baggage carrousel as well as a centralized immigration with automated border control and kiosks for the new entry process. Currently we provide support for the planning and execution of the project.

Services

- Development and evaluation of layout options
- Planning of a central immigration checkpoint with automated border control and kiosks
- Functional design of the selected concept
- Development of a comprehensive program of requirements
- Stakeholder coordination
- Tendering and critical review of a technical feasibility study

Period of Services:
Since 2019
