

Re-development of the Terminal Arrival Area

To fulfill the EU requirements for the Entry-Exit-System (EES) by 2022 the existing arrivals area has been expanded and modernized. TH Airport Consulting has developed a functional layout which included an expanded reclaim area with new baggage carrousel as well as a centralized immigration with automated border control and kiosks for the new entry process. We provided project support during all phases until its full completion.

Services

- Development and evaluation of layout options
- Planning of a central immigration checkpoint with automated border control and kiosks
- Detailed functional design of the selected concept
- Development of a comprehensive program of requirements including a phasing strategy and interim processes
- Tendering and critical review of a technical feasibility study
- Project support, coordination and stakeholder management during design, construction and start-up

Period of Services:
2019 – 2024
