

Airside Compatibility Analysis for B747-8 Operations

For operation of the new Boeing 747-8 at Hannover International Airport an airside compatibility analysis had to be carried out. The analysis formed a relevant part of the approval procedure with the local authorities.

Services:

- Comparison of Hannover Airfield Items versus ICAO Annex 14 as well as recommendations of the Boeing 747-8 Airport Compatibility Group (BACG)
- Analysis of critical Items
- Recommendation of measures to assure safe B747-8 operation
- Support during approval procedure

Period of Services:
2010 - 2012
