

Optimization of the Airside Terminal Infrastructure

Hamburg International Airport has developed layouts and phasing concepts for its entire Airport Infrastructure for the year 2025. The development of the Airside Terminal Infrastructure as part of the process has been provided by TH Airport Consulting. The selected concepts have been refined and optimized for the various project phases. As a result several separate projects have been implemented.

Services

- Determination of planning requirements
- Layout development for alternative concepts and its evaluation
- Recommendation of a phasing concept
- Detailed requirements specification, process and layout planning for walk-boarding and busgate facilities, an A380 gate and modifications of the existing concourses
- Project support during implementation and start-up

Period of Services:
2010 - 2018
