

Shuttle Gates on Apron 2

In order to cover a significant shortage of gate capacities in the context of the expansion of Pier South, an new satellite building, which includes 14 additional walk-boarding gates , will be established on apron 2. The building will be linked to the main terminal by a shuttle bus service for departing and arriving passengers. TH Airport Consulting supports the aviation department of Hamburg Airport during all stages of the project.

Services

- Analysis of passenger flows and determination of needed capacities for waiting, gate and circulation areas through simulation
- Development of a comprehensive program of requirements
- Stakeholder coordination
- Development of high level concepts and detailed functional layouts
- Planning of operational processes and the needed terminal equipment

Period of Services:
Since 2017
(ongoing)
